## ML 2225

An excellent general service packing for use on rotary pumps, reciprocating pumps, agitators and other rotating equipment.

### Recommended For:

Brine, caustics, mild acids, difficult chemicals, air, gases, solvents, oils, general chemical plant applications.

### Features:

Yarns are coated in PTFE suspensoid. This system of impregnation assures even distribution of the PTFE particles, protecting the fibers from chemical action.

### Limitations

Shaft speeds to 1850 fpm; temperatures to 500°F/ 260°C, pH 3-11.

### Surface Treatment

A surface coating of PTFE is applied after braiding. To assure good break-in characteristics, a special high temperature synthetic lubricant is added.
